

HTML Launch App - Privacy Policy

Last updated: 2026-08-16

HTML Launch is designed as a local library and runner for single-file HTML apps on iPhone and iPad. The HTML Launch app itself does not collect, store, sell, or share your personal data with Thespesio Studio.

1. Information We Do Not Collect

HTML Launch does not operate an account system, analytics service, advertising network, or developer backend that receives personal information from the app.

- Name, email address, or phone number
- Precise or approximate location
- Device identifiers for advertising or tracking
- Usage analytics
- Contacts, photos, camera, microphone, or health data
- Your saved HTML source code or the local data created by your saved HTML apps
- Payment card details or Apple ID credentials

HTML Launch has no sign-in and does not require an HTML Launch account.

2. How Your HTML Apps Are Stored

HTML apps you create or save in HTML Launch are stored locally on your device.

The app may also store local settings for each saved app, such as its title, custom name, selected icon, icon color, and creation or modification dates.

Each saved HTML app is given its own persistent WebKit data store. Browser state created by that HTML app, such as localStorage, is kept separately from the browser state of your other saved HTML apps.

Thespesio Studio does not operate a server that receives or stores this content.

3. Network Activity From HTML You Run

HTML Launch does not automatically upload your saved HTML apps to Thespesio Studio.

However, HTML code that you choose to run can access the internet if that code is written to do so. For example, a saved HTML app may load remote images, scripts, fonts, APIs, or other web resources.

Any such network request is initiated by the HTML content you run. Data sent to a third-party website or service is subject to that third party's own terms and privacy practices. Thespesio Studio does not control or receive those third-party communications unless the HTML itself is explicitly written to communicate with a service operated by Thespesio Studio.

4. In-App Purchases

HTML Launch offers HTML Launch Pro as a one-time in-app purchase.

Purchases are processed by Apple through StoreKit and the App Store. HTML Launch uses StoreKit on your device to determine whether the Pro entitlement is active.

Thespesio Studio does not receive your payment card details or Apple ID password. Apple may process purchase and account information according to Apple's own privacy policy and App Store terms.

5. File Exports

If you choose to export a saved HTML app to Files, the export is performed through iOS system file controls and remains under your control.

HTML Launch does not automatically upload exported files to Thespesio Studio.

6. Analytics, Advertising, and Tracking

HTML Launch does not include third-party analytics SDKs, advertising SDKs, or tracking technologies for profiling users across apps or websites.

If this changes in a future version, this Privacy Policy will be updated and the relevant App Store privacy disclosures will be revised.

7. Children's Privacy

HTML Launch does not knowingly collect personal information from children or maintain user profiles.

Because users can run their own HTML code, parents or guardians should understand that user-provided HTML may connect to external websites or online services if the code is written to do so.

8. Changes to This Policy

If we update this Privacy Policy, we will publish the revised version and update the Last updated date.

9. Contact

For questions about this Privacy Policy, please contact Thespesio Studio through the HTML Launch page:
